TITLE: Two-dimensional nonstationary flow of incompressible viscous electrically conducting liquid near the critical point in a magnetic field

CITED SOURCE: Tr. Tbilissk. un-ta, v. 84, 1961 (1962 193-201)

TOPIC TAGS: magnetohydrodynamics, tow-dimensional

TRANSLATION: The problem is considered of the two-dimensional non-stationary flow of a conducting viscous incompressible liquid on an infinite plane, with the liquid acted upon by an external parallel magnetic field perpendicular to the plane, and the flow in the vicinity of the critical point is determined. A system of integral equations is obtained for the determination of the velocity and of the induced magnetic field, which can be solved by successive approximations. Bibliography, 5 titles. V. AUTHOR: Shirikhin, N.V., Technician   SOV/91-58-3-13/28

TITLE: Experience Acquired in Operating the SEU-4 Electrolytic System (Opyt
             ekspluatatsii elektroliznoy ustanovki tipa SEU-4) Exchange of
             Experience (Obmen opytom)

PERIODICAL: Energetik, 1958, Nr 3, pp 18-20 (USSR)

ABSTRACT: The author lists the deficiencies of the electrolytic outfit
             SEU-4. He especially stresses the fact that the pipes con-
             ducting hydrogen into receivers used to freeze in winter.
             Then he describes and illustrates changes introduced into the
             system to eliminate the drawbacks of the old arrangements.
             The gas pipe was packed into 210 coils of a PR-2.5 sq mm wire,
             fed by 24 V AC current. A special ramp (with 2 collectors)
             for connecting the receivers and the gas-piping of the ge-
             nerators with electrolytic equipment proved especially ad-
             vantageous.
             There is 1 photo and 1 circuit diagram.

TITLE: On one boundary-value problem for second order ordinary differential equations

TOPIC TAGS: boundary value problem, second order differential equation, ordinary differential equation, Thomas Fermi equation, Cauchy problem

ABSTRACT: The qualitative behavior of solutions of two boundary-value problems important in mathematical physics

$$y'' + \frac{2}{x} y' - y + y^n = 0. \quad n > 0. \quad x > 0. \qquad (\cdot)$$

$$y(0) = y_0 < \infty, \quad y'(0) = 0, \quad y(\infty) = 0,$$

Card 1/3

L 16653-65
ACCESSION NR: AP4045706

and

$$\eta'' = \eta - \frac{\eta^n}{z^{n-1}}, \qquad n > 0, \quad z \geqslant 0,$$
(2)

$$\eta(0) = 0, \quad \eta'(0) = \alpha < \infty, \quad \eta(\infty) = 0,$$

where yo and α are unknown positive parameters in studied. It is proved that when $o < h \leq 1$, problems (1) and (2) have no positive solutions. When $n > 1$, problem (1) is substituted by an equivalent one. It is proved that for any $\alpha > o$ and $n > 1$, there exists a unique solution, continuously dependent on α, of the Cauchy problem for an equivalent equation under certain initial conditions defined for all $x > o$. In the case of $1 < h \leq 3$, it is proved that boundary value problem (1) and (2) have at least one positive solution for any n. The graph of the solution of boundary-value problem (1) for the case n=3/2 (generalized Thomas-Fermi equation) is presented. Orig. art. has: 25 formules.

TITLE: Cauchy problem and boundary value problem for certain nonlinear ordinary differential equations of second order

SOURCE: AN SSSR. Doklady, v. 163, no. 4, 1965, 834-836

TOPIC TAGS: differential equation, Cauchy problem, boundary value problem, stability

ABSTRACT: The author considers

$$y'' + \frac{2}{x}y' - y + y^n = 0, \quad n > 1, \quad x \geqslant 0; \tag{1}$$

$$y(0) = y_0 < \infty, \quad y'(0) = 0, \quad y(\infty) = 0, \tag{2}$$

$$\eta' = \eta - \frac{\eta^n}{x^{n-1}}, \quad n > 1, \quad x > 0; \tag{3}$$

$$\eta(0) = 0, \quad \eta'(0) = a < \infty, \quad \eta(\infty) = 0, \tag{4}$$

$$z'' + \frac{2}{x}z' - z + |z|^{n-1}z = 0, \quad n > 1, \quad x > 0; \tag{5}$$

$$z(0) = z_0 < \infty, \quad z'(0) = 0, \quad z(\infty) = 0, \tag{6}$$

Card 1/2

L 0814-66
ACCESSION NR: AP5020821

and proves the following three theorems. Theorem 1. For any positive integer i $(i = 0,1,2,...)$ and any $n = (2p + 1)/(2q + 1)$ (p and q are natural numbers), $1 < n < 4$, there exist solutions $y = y_i(x)$, $\eta = \eta_i(x)$ of problems (1)-(2) and (3)-(4) having precisely i zeros on the interval $0 < x < \infty$. Problem (5)-(6) has solution $z = z_i(x)$ with i zeros on the interval $0 < x < \infty$ for any real $n > 1$, $n < 4$. Theorem 2. Any solution of problems (1)-(2), (3)-(4) and (5)-(6) is Lyapunov-stable. Theorem 3. Problems (1)-(2), (3)-(4), and (5)-(6) do not have nontrivial solutions if $n \geq 5$. Any solution $y = y(x)$, $z = z(x)$ of equations (1) and (5) under the conditions $y(0) > 0$, $y'(0) = 0$ and $z(0) > 0$, $z'(0) = 0$ oscillates near the lines $y = 1$ and $z = 1$, remaining positive. Any solution $\eta = \eta(x)$ of equation (3) under the condition $\eta(0) = 0$ and $\eta'(0) > 0$ oscillates near the line $\eta = x$, remaining positive. "The author expresses his deep gratitude to Ye. P. Zhidkov for his continual attention to this work and for his discussions." Orig. art. has: 6 formulas.

TITLE: Preparation of bimetal billets for merchant shapes using electro-slag facing with a wide electrode

PERIODICAL: Avtomaticheskaya svarka, no. 9, 1961, 70-81

TEXT: The Institut elektrosvarki im. Ye.O.Patona   (Electric Welding Institute im. Ye.O.Paton) has developed a new method for cladding metal billets with wear-resistant metal prior to final rolling into merchant bar stock. The essence of the method consists in preparing a groove on steel billets, e.g. blooms by rolling, and filling the groove with other metal using the electro-slag process. The arrangement is shown in a diagram (Fig.1). The shoe remains immobile, the billet is moved continually past the shoe, and a massive wide electrode is fed downward. The shoe is sealed by locks, or by graphite (Fig.2) to prevent metal and slag from running out. Only slight bath level fluctuations are permissible, the billet must move with a speed matching the groove filling. An automatic control system (Fig.3) moves a carriage with the bloom on. The d... ... ... carriage is

Card 1/5

Preparation of bimetal billets ....

fitted with an electrodynamic amplifier, and a feeler in the show reacts to
the approach of liquid bath level and changes current in the amplifier ex-
citation winding to speed up the carriage. The system is controlled by a
voltmeter, a control tube and a rheostat on the control board. The elec-
trode is fed automatically. Three advantages of the metal are pointed out:
(1) High productivity of the process due to strong current used. (2) Mas-
sive square or round electrodes can be used, and they are cheaper than elec-
trode wire, powder wire, ceramic flux etc. (3) Clidding blocks in inclined
position is possible with a comparatively simple arrangement, and short
electrode that can be used are easy to guide accurately. There are 3 fig-
ures.

TITLE: The effect of monoamineoxidase inhibitors on the convulsive performance of bemegride

SOURCE: AN LatSSR. Izvestiya, no. 1, 1964, 59-62

TOPIC TAGS: analeptic drugs, bemegride, convulsion, monoamine oxidase, monoamine oxidase inhibitor, hydrazide, benzylhydrazide of lactic acid, yprazide, transamine, adrenergic processes, reserpine, pyrogallol, aminazine

ABSTRACT: The present investigation was undertaken to study the relationship between the role of the analeptic drug bemegride in causing convulsions, and the effect of certain monoamineoxidase inhibitors, such as benzylhydrazide of lactic acid, isopropylhydrazide, yprazide, transamine, imypramine, reserpine, and pyrogallol. The tests were conducted using the technique x^2, as described by M. L. Belen'kiy (Elementy* kolichestvennoy otsenki farmakologicheskogo effekta. Riga, 1959), with the participation of the staff of the department of pharmacology of the Riga Medical Institute. In the first series of experiments, conducted on 600 white mice, isopropylhydrazide, benzylhydrazide yprazide, and transamine were injected

Card 1/3

ACCESSION NR: AP4024552

intraperitoneally in respective doses of 100, 25, 100, and 10 mg/kg, following which 20 mg/kg of bemegride were introduced intraperitoneally after 3, 12, 24, or 48 hours. It was observed, that in the 3-hour interval injection all inhibitors facilitated the onset of clonic convulsions. In the 24-hour interval injection only the benzylhydrazide of lactic acid exhibited an enhancing effect on the onset of convulsions, with 16 mice out of 20 being afflicted, as against 8 for the controls. In the second series of experiments, the bemegride was introduced intraperitoneally to mice within one hour following the intraperitoneal administration of 50 mg/kg imypramine or 10 mg/kg aminazine, or within 2 hours after the administration of 50 mg/kg of either ypramine or pyrogallol, or following 3 hours after the administration of either 2.5 mg/kg reserpine or of 200 mg/kg pyrogallol. It was found that reserpine, as well as pyrogallol, facilitated the onset of clonic convulsions by bemegride. In the third series of experiments, 30 mg/kg Bemegride were introduced intraperitoneally to mice after a 3-hour interval following the administration in the same manner of benzylhydrazide of lactic acid, of yprazide, or of transamine. While transamine proved practically ineffective, the administration of benzylhydrazide of lactic acid and of yprazide resulted in a marked increase in the number of mice afflicted with tonic convulsions, with most cases being fatal. It is concluded that the facilitating effect on the onset of tonic convulsions

TITLE: Bus Supports for Multibar Buses

PERIODICAL: V sb.: Energ. str-vo. Vol 3, M.-L., 1958, p 37

ABSTRACT: A bus-support construction is examined in which the intermediate
    copper shims are replaced by steel washers 10-mm thick and 55-60-mm
    diameter; spacing washers are made of 1/2" gas pipe (11-mm high) which
    ensures free movement of the bus. This substitution resulted in a saving of
    3.1 kg of copper per one bus support in the generator-bus structure at the
    Voroshilovgrad regional electric station.

TITLE   System for feeding coal dust into a converter used for pyroselection
             (Sistema podachi ugol'noy pyli v konverter dlya protsessa piroselektsii)

PERIODICAL   Tsvetnyye Metally, 1958, Nr.3., pp. 38 - 46 (USSR)

ABSTRACT   The authors describe preliminary investigations at the Kirovgradskiy
             copper-smelting works before the adoption of its pyroselection method
             which involves the injection into the converter of coal dust at a
             fixed rate in relation to the air flow (pressure 0.7 - 1.0 atm gauge)
             The initial system involved pressurization of the bunker, but later an
             atmospheric pressure design, as tested at the Krasnoural'sk copper-
             smelting works was adopted and incorporated in the full-scale
             installation commissioned in August 1955. The installation (fig.1.)
             consists of the following parts, each of which is described and
             discussed. The pneumatic screw pump has an adjustable speed of
             revolution and a pump (fig.2.), the latter being based on one made by
             the Pavshinskiy mechanical works; a KSE-6 compressor supplies
             compressed air. The air/dust mixture (5-10 kg coal dust per kg air)
             moves to the converter at 12-15 m/sec. A critical part of the instal-
             lation is the air and gas distribution system near and in the
             converter; here a blind-pass collector (fig.4) proposed by
Card 1/2   N.A. Shirinkin, M.D. Galimov and A.A. Babadzhan, and designed with the

System for feeding coal dust into a converter used for pyroselection.   136-58-3-7/21

   participation of M.D. Galimov, Ye.A. Verkhoturova and B.P Smorodyakov
   was found to give even feed to all the tuyeres. An ejector type of
   tuyere with individual air and air/coal feeds, proposed and designed
   by M.D. Galimov, A.A. Babadzhan, B.P. Smorodyakov, S.Ya. Musikhin
   and A.A. Verkholetov was chosen (fig.7). To avoid air losses during
   tuyere clearing a ring seal designed by S.M. Popov, Engineer, is
   used. The authors recommend the system described for other processes
   requiring the injection of coal dusts into a fused mass. There are
   7 figures.

TITLE: Experience in the Deep Drawing of Thin Sheet Parts (Opyt glubokoy vytyazhki tonkolistovykh detaley)

PERIODICAL: V sb.: Progressiv. tekhnol. kholodnoshtamp. proiz-va Moscow-Leningrad, Mashgiz, 1956, pp 188-193

ABSTRACT: An examination is made of experience in the employment of a pack of sheet blanks (B) for simultaneous deep drawing of a number of details. The multiple-layer B may consist of a number of sheet B of identical or different thickness. Special problems in the design of dies for drawing thin sheet B are examined.

TITLE: Solutions of the plane problem of the theory of creep in the presence of
volume forces

CITED SOURCE: Sb. Vopr. energ., avtomatiki, mekhan. i gorn. dela. Tashkent.
AN UzSSR, 1962, 167-169

TOPIC TAGS: creep, creep theory, body force, volume force, Volterra equation,
Poisson coefficient, biharmonic operator

TRANSLATION: The quasistatic plane problem of the theory of creep of a homogenous
isotropic medium taking account of aging and past history, with variable components
of the volume forces, X (x,y) and Y (x,y) is studied. The linear integral depen-
dence of the theory of creep of the N. Kh. Arutyunian type (Some Questions in the
Theory of Creep, A.-L. Gostekhizdat, 1952) is used as the basic physical relation.
It is assumed that the Poisson coefficient and the after effect kernel which cor-
responds to it do not depend on time. It is established by consideration of the

ABSTRACT: On the basis of the equation of V. A. Florin (Osnovy mekhaniki gruntov -- Fundamentals of Soil Mechanics -- Moscow 1961) for the relationship between the coefficient of porosity and stress under conditions of nonlinear creep, the author considers a layer of soil of given thickness subjected to the effect of an external load which changes at a constant rate with respect to time. The solution is reduced to finding the solution of a nonlinear differential equation for initial and boundary conditions, and expressions are obtained which are readily programmed for solution by computer. A three-curve graphic representing the solution for the case

TITLE: Solution of the plane contact problem with regard to creep for bodies which are nonhomogeneous with respect to depth

SOURCE: Ref. zh. Mekhanika, Abs. 12V270

REF SOURCE: Sb. Vopr. mekhaniki. Vyp. 2. Tashkent, Nauka, 1965, 84-100

TOPIC TAGS: contact stress, creep, plane flow, elasticity

ABSTRACT: The problem indicated in the title is solved assuming initial integral physical relationships of the type given by N. Kh. Arutyunyan (see Prikl. matem. i mekhan., 1959, 23, No. 5, 901-924 - RZhMekh, 1960, No. 5, 6448) for the case where the modulus of elasticity increases with depth according to a power law and Poisson's ratio is a linear-fractional function of the exponent of nonlinearity. In the case of contact without friction and adhesion, the problem leads in an ordinary manner to solution of a linear Volterra's integral equation of the second kind with respect to an integral operator acting on normal pressure with a difference kernel of fractional order (in the general case) characteristic for the corresponding momentary elasticity problem of nonhomogeneous bodies of the given type. Explicit expressions of normal pressure are derived in three special cases: 1) a punch with a flat base parallel to

Card 1/2

L 08475-67

ACC NR: AR6016474   /

the bottom surface; 2) pressure of a circular cylinder; 3) stress under the base of a
strip foundation loaded off center. It is found that creep has no effect on the dis-
tribution of stresses in the first case for rigid punches. In the second case, creep
leads to redistribution of stresses with a time-dependent redistribution factor. The
only effect of creep in the third case is a change in the angle of turn of the founda-
tion with the passage of time. Bibliography of 22 titles. M. I. Rozovskiy. [Trans-
lation of abstract]
